

KHAGESWAR MAHARANA

Java Full Stack Developer

Bhubaneswar, Odisha, India | 8260532020 | khageswarmaharana462@gmail.com | [linkedin.com/in/khageswar](https://www.linkedin.com/in/khageswar) | github.com/Khageswar-M

PROFESSIONAL SUMMARY

Java Full Stack Developer with hands-on experience building scalable backend services and production-style applications using Java (17/21), Spring Boot, Spring Security (JWT), REST APIs, MySQL, and Redis caching. Focused on resilience, performance, and operational stability, applying rate limiting (Bucket4j), transactional consistency (@Transactional), and robust exception handling to improve service behaviour under load. Experienced with AWS (EC2/RDS/S3), Docker, observability basics (logs/metrics), and load/performance testing using JMeter. Strong CS fundamentals and problem-solving with 250+ LeetCode problems solved.

TECHNICAL SKILLS

Languages: Java (17/21), JavaScript (ES6+)

Backend: Spring Boot, Spring MVC, Spring Security, REST APIs, JWT, Microservices-style architecture, Maven, Transaction Management (@Transactional)

Performance / Reliability: Redis Caching, Rate Limiting (Bucket4j), API Optimization, Benchmarking (JMeter)

Frontend: React.js, Redux, React Native (Expo), HTML5, CSS3, Tailwind CSS, Bootstrap

Databases: MySQL

Testing: JUnit, Mockito, Postman

Cloud / DevOps: AWS (EC2, RDS, S3), Docker, Git, GitHub

EXPERIENCE

Java Full Stack Engineer Intern — Angodigital Technologies Pvt. Ltd.

Oct 2025 – Nov 2025 | Bangalore, ITPL (Onsite)

- Built a production-grade Authenticator Web App using React.js and Spring Boot REST APIs, implementing secure authentication flows and responsive UI from Figma using Tailwind CSS.
- Developed an Authenticator Mobile App using React Native (Expo) with efficient navigation and pagination patterns to ensure smooth multi-screen performance.
- Contributed to a Spring Boot + MySQL system supporting real-time purchases, exports, and inventory; improved data consistency using transaction management (@Transactional) and applied caching strategies to reduce repeated database calls.
- Collaborated in Agile delivery with daily stand-ups and sprint tracking in Rally, used GitHub feature branches and pull requests on a shared multi-developer codebase.
- Reduced SQL query execution time by approximately 45% through indexing and query optimization.

PROJECTS

NexusOps | [GitHub](#)

React.js, Spring Boot, MySQL, Spring Security (JWT/RABC), Tailwind CSS, Axios, Brevo

- Built a full-stack team operations and workflow management platform with secure REST APIs, JWT authentication, and role-based access control (RBAC) enforcing granular permissions across user roles.
- Implemented centralized exception handling, request-level input validation, and protected routing to strengthen the reliability and security of frontend-backend communication.
- Designed the MySQL schema and REST API contracts to support multi-role operational workflows, keeping frontend and backend concerns cleanly separated for easier maintenance.
- Integrated Brevo for transactional notifications, enabling near real-time operational updates across the platform.
- Deployed backend on AWS EC2, database on AWS RDS (MySQL), and assets on AWS S3; containerized services using Docker for consistent, portable deployments.

Ninety (90-Day Challenge Tracker) | [GitHub](#)

React Native (Expo), Spring Boot, MySQL, Redis, Bucket4j, Resend, OpenAI API

- Built a cross-platform challenge-tracking app with OTP-based email verification, secure backend APIs, and optimistic UI for a smooth, low-latency user experience.
- Improved service resilience and control using Redis caching and Bucket4j rate limiting, protecting APIs during burst traffic and reducing redundant DB access.
- Performed load/performance testing (JMeter) on core APIs to validate throughput, latency, and error rate under varying load conditions, documenting benchmarks and bottlenecks.
- Integrated OpenAI API to generate in-app AI coaching feedback and built an admin “Control Room” dashboard for real-time monitoring of users and system health signals.
- Authored the app’s privacy policy and planned the production infrastructure (managed DB, caching, transactional email, and push notification services) to support scaling beyond initial launch.
- Deployment: Deployed backend on AWS EC2, database on AWS RDS (MySQL), and assets on AWS S3, containerized services using Docker.

EDUCATION

Aryan Institute of Engineering & Technology, Bhubaneswar

Nov 2022 – 2026

Bachelor of Technology in Computer Science | CGPA: 8.56 | 3× College Topper

ACHIEVEMENTS

- Solved 250+ Data Structures and Algorithms problems on [LeetCode](#).
- Highest SGPA in 3 semesters, strong academic record with zero backlogs.
