

KHAGESWAR MAHARANA

Java Full Stack Developer

Bhubaneswar, Odisha, India | 8260532020 | khageswarmaharana462@gmail.com | linkedin.com/in/khageswar | github.com/Khageswar-M

PROFESSIONAL SUMMARY

Java Full Stack Developer with hands-on, production-grade experience across Java, Spring Boot, Spring MVC, and RESTful API/microservice-style architecture, complemented by React.js/React Native for end-to-end delivery. Applies OOP, SOLID design principles, and core concurrency concepts to write clean, scalable code, with unit testing (JUnit/Mockito) supporting reliability. Skilled in JWT/Spring Security authentication, MySQL data modeling, and Redis caching for scalable, high-performance applications. Experienced in Agile/Scrum delivery, Git/GitHub collaboration (branching, pull requests), and leveraging AI-assisted development tools, including the Anthropic Claude API, to accelerate coding and documentation. Strong problem-solver with 250+ DSA problems solved on LeetCode and a track record of rapidly learning new technologies to ship reliable software.

TECHNICAL SKILLS

Languages & Core: Java (OOP, Data Structures & Algorithms), JavaScript (ES6+)

Backend: Spring Boot, Spring MVC, Spring Security, RESTful APIs / Microservice-style Architecture, JWT Authentication, Design Patterns & SOLID Principles, Core Concurrency Concepts, @Transactional / Caching Strategies

Testing: JUnit, Mockito (Unit Testing)

Frontend: React.js, Redux, React Native (Expo), HTML5, CSS3, Tailwind CSS, Bootstrap 5

Databases & Caching: MySQL, Redis (Upstash), Bucket4j Rate Limiting

Tools & Practices: Git, GitHub (branching & PRs), Postman, Agile/Scrum, Rally, Figma-to-code implementation

AI-Assisted Development: API integration for in-app AI features; daily use of AI coding assistants for accelerated development and documentation

EXPERIENCE

Java Full Stack Engineer Intern — Angodigital Technologies Pvt. Ltd.

Oct 2025 – Nov 2025

Bangalore, ITPL (Onsite)

- Developed a production-grade Authenticator Web App using React.js and Spring Boot-backed REST APIs, following Figma designs for pixel-perfect, cross-device responsive UI; adopted Tailwind CSS within 3 days.
- Learned React Native within 5 days and independently built an Authenticator Mobile App in JavaScript, implementing efficient navigation, routing, and pagination to improve performance.
- Contributed to a Spring Boot + MySQL Poultry Market System handling real-time purchases, exports, and inventory; improved backend efficiency using caching strategies and @Transactional annotations for data consistency.
- Collaborated in an Agile environment with daily stand-ups and sprint tracking in Rally; used GitHub branching strategies and Pull Requests on a shared multi-developer codebase.

PROJECTS

NexusOps — React.js, Spring Boot, MySQL, JWT, Tailwind CSS, Axios, GitHub

- Built a full-stack, responsive team operations and workflow management application using React.js and Spring Boot, featuring JWT/Spring Security-based authentication, role-based access control, and secure RESTful API integration.
- Integrated Brevo-powered messaging and notification services for real-time team updates, with a scalable interface optimized across devices.
- Designed secure authentication and protected routing from the ground up, resolving asynchronous communication and exception-handling challenges for reliable frontend-backend data flow.

Ninety – 90-Day Challenge Tracker — React Native (Expo), Spring Boot, MySQL, Redis, Anthropic Claude API, Resend

- Designed and built a cross-platform challenge-tracking app with a React Native/Expo frontend and Spring Boot REST API backend, including OTP-based email verification and optimistic UI.
- Implemented Upstash Redis and Bucket4j rate limiting to keep APIs performant under rapid repeated requests, plus a rivalry/QR-based social challenge system to drive engagement.
- Integrated the Anthropic Claude API to power in-app AI coaching feedback and built an admin Control Room dashboard for real-time monitoring of users and system health.
- Architected the full system end-to-end (data model, caching layer, auth flow, admin tooling) and produced complete UI/UX mockups across every screen prior to development.

EDUCATION

Aryan Institute of Engineering & Technology, Bhubaneswar

Nov 2022 – 2026

Bachelor of Technology in Computer Science | CGPA: 8.56 | 3x College Topper

ACHIEVEMENTS

- Solved 250+ Data Structures and Algorithms problems on LeetCode.
- Secured the highest SGPA in 3 semesters and maintained a strong academic record with zero backlogs.
